## EDUCATION

### THE STATE SCHOOL OF HIGHER EDUCATION IN CHELM

B.S. IN MATH AND COMPUTER SCIENCE 2010 - 2013 | Chelm, Poland

## SKILLS

### PROGRAMMING

Daily basis:

shell scripting (sh) • python • go lang

### CLOUD

AWS - CloudFormation, Lambda, RDS, S3, DNS, VPC, Serverless, EKS, ECS, Networking

GCP - GKE, VMs, CloudBuild, MemoryStore, CloudSQL, StackDriver

Azure - VMs, RGs, OMS (Logging & Monitoring), SQL, Storage, DevOps

### TECH

Linux/Unix, Docker, Kubernetes, LXC, KVM, Ansible, DNS, LDAP, HTTP, SMTP, HA/Fail-Over, Monitoring, Git, Networking.

## CERTIFICATES

SAA-C02 - AWS Certified Solutions Architect - Associate

HashiCorp Certified: Terraform Associate

HashiCorp Certified: Vault Associate

CKA - Certified Kubernetes Administrator

AZ-900 - Azure Fundamentals

Novell Certified Linux Administrator 11

Red Hat Certified System Administrator 7 (expired)

Red Hat Certified Engineer 7 (expired)

## EXPERIENCE (LAST 5 YEARS)

**EPSYHEALTH | DEVOPS ENGINEER (CONTRACT)** Jan 2021 - Nov 2022, London, UK

Epsy is a pioneering digital health platform dedicated to expediting the journey towards optimal treatment for individuals affected by epilepsy.

As the sole DevOps Engineer, I have created an entirely new infrastructure from the ground up. This encompasses a novel networking stack, IAM roles, ECS and Data Platform, and GitHub Actions as a CI/CD. Our comprehensive technology stack boasts a wide array of cutting-edge tools: Amplify, DynamoDB, Peering, Multi-region, RDS, API Gateway, Cognito, Serverless, ECS, WAF, Route53, Network Firewall, IAM with SSO, Terraform Cloud, GitHub Actions, and Sentry.

**COGNIFLARE | DEVOPS ENGINEER (CONTRACT)** Aug 2020 - Dec 2020, London, UK

I worked with GlaxoSmithKline on behalf of Cogniflare, in a greenfield project to build Big Data infrastructure using Azure CLI, PowerShell, JSON, YAML, Azure DevOps, and Azure ARM Templates. It was an exciting opportunity to design and implement scalable secure solutions for cutting-edge data processing.

**LIFEWORKS | SNR DEVOPS ENGINEER (CONTRACT)** Nov 2019 - May 2020, London, UK

LifeWorks is a well-being platform used by more than 15 thousand companies.

Working on AWS Infrastructure that's been spread between many accounts and regions. CI/CD was done mostly by Jenkins. A lot of native AWS services are in use: SNS, SQS, DynamoDB, ECS, Athena, RDS, API Gateway, CloudFront, Lambda

Tech Stack: Ansible, Terraform 0.11 / 0.12, Jenkins, Bamboo, CircleCI, Serverless, MongoDB, Docker

**DAYE | DEVOPS ENGINEER (CONTRACT)** Jul 2019 - Nov 2019, London, UK

Bootstrapped infrastructure on GCP using Kubernetes (GKE), Terraform, Cloud Run.

CI/CD to Cloud Run / Kubernetes using Cloud Build + GitHub.

I've developed few backend apps using Python/Flask that are used in a production environment.

**LEGAL AID AGENCY - MOJ | DEVOPS** Sep 2018 - Jun 2019, London, UK

Providing support and maintenance for new LAA Infrastructure. Daily code reviews and often production deployments. One of my biggest internal projects here was to migrate old FTP fleet into AWS Lambda and S3 using Python. Migration of services/networking from Atos into AWS.

Tech Stack: Fully based on AWS: EC2, ECS, CloudFormation, Lambda, RDS, S3

**HMCTS - MOJ | DEVOPS** Mar 2017 - Sep 2018, London, UK

During my time at HMCTS I've been working on couple of internal projects:

Migrating Cloud Atlassian to On-premise

Planning and configuring new infrastructure for internal ROTA service

Worked on new Online Plea infrastructure

Worked on migration from UKCloud to Azure

Tech Stack: Azure, Ansible, Jenkins 1/2, Terraform, Gerrit, Zabbix, ELK, AppDynamics, Wildfly, Artifactory, Artemis, PostgreSQL

**AUTOMATION LOGIC | ENGINEERING CONSULTANT** Mar 2017 - Jun 2019, London, UK

Consultant Engineer working for GOV.UK organisations

**STORAGE MADE EASY | DEVOPS / SENIOR DEVOPS**

Jun 2015 - Aug 2016, London, UK as DevOps

Sep 2016 - Mar 2017, London, UK as Snr DevOps

At SME I've been working on introducing DevOps methodology to the Dev team. I've migrated old File Fabric appliance from CentOS 5 into CentOS 7 (w/o docs). The whole cycle of building appliance has been automated using Ansible. I've been providing Level 3 support for our customers as well as planning the infrastructure for new customers.

Stack: LAMP, Ansible, Haproxy, Memcached, KVM, AWS, GCE, Azure, OpenStack, Ceph, Docker, VMware, Python, Juju
