EDUCATION

THE STATE SCHOOL OF HIGHER EDUCATION IN CHELM

B.S. IN MATH AND COMPUTER SCIENCE 2010 - 2013 | Chelm, Poland

SKILLS

PROGRAMMING

Shell Scripting (Bash)
Python
Golang

CLOUD

AWS - CloudFormation, Lambda, RDS, S3, DNS, VPC, Serverless, EKS, ECS, Networking
GCP - GKE, VMs, CloudBuild, MemoryStore, CloudSQL, StackDriver
Azure - VMs, RGs, OMS (Logging & Monitoring), SQL, Storage, DevOps

TECH

Linux/Unix, Docker, Kubernetes, LXC, KVM, Ansible, DNS, LDAP, HTTP, SMTP, HA/Fail-Over, Monitoring, Git, Networking.

CERTIFICATES

SAA-C02 - AWS Certified Solutions Architect - Associate
HashiCorp Certified: Terraform Associate
HashiCorp Certified: Vault Associate
CKA - Certified Kubernetes Administrator
AZ-900 - Azure Fundamentals
Novell Certified Linux Administrator 11
Red Hat Certified System Administrator 7 (expired)
Red Hat Certified Engineer 7 (expired)

PROFESSIONAL EXPERIENCE (LAST 5 YEARS)

SIGNAL AI | SENIOR SITE RELIABILITY ENGINEER Jul 2023 - Present, London, UK

Platform Modernization & Migration: Orchestrated the successful transition of 250+ applications from Amazon ECS to EKS, reducing vendor lock-in and improving autoscaling. Migrated legacy MWAA Airflow and distributed Step-Functions/CronJob Lambdas into an in-house, centralized Airflow and Argo Workflows stack on EKS, simplifying execution and unifying Elasticsearch curators.

Cost Optimization & Cloud Efficiency: Designed and executed EKS rightsizing initiative utilizing 95th percentile CPU/memory metrics across multiple clusters, identifying and eliminating over-provisioned resources to reduce overall Kubernetes compute costs. Audit-cleaned AWS infrastructure by deprecating obsolete HTTPRoutes, unused accounts (Test/R&D), and legacy EBS snapshots/volumes, saving \$2,000/month in cloud costs.

Security, Compliance & Penetration Testing: Acted as SecOps for enterprise compliance audits, RFP security assessments, and vendor onboarding. Led a comprehensive Penetration Testing initiative—driving vendor quoting, automating large-scale GitHub variable replacements, remediating the Copy Fail CVE, and fixing core vulnerabilities via OpenCode/Claude while implementing strict Kubernetes Network Policies.

Observability & Engineering Excellence: Led the migration from legacy Prometheus to a highly available, scalable Thanos-based observability stack on Kubernetes. Modernized engineering onboarding documentation and scaled cross-functional platform training by updating and correcting core Kubernetes interactive tutorials.

Incident Management & Disaster Recovery: Led a company-wide "GameDay" DR simulation, successfully executing production standby failovers in a record time of 7.5 hours. Directed the post-mortem analysis, integrated risk-events into standby environments, tuned Thanos metrics retention and established dedicated Slack alerting pipelines for recovery isolation. Led the mitigation and post-mortem of a various critical incidents.

KAIZEN TICKETING | CLOUD ENGINEER (CONTRACT) Apr 2019 - Present, London, UK

Led migration of legacy C# monolithic application from AWS EC2 to Google Kubernetes Engine (GKE) with zero downtime, modernizing infrastructure on Google Cloud Platform.

Designed and implemented secure, production-grade GKE clusters (QA/Prod) adhering to GCP best practices for reliability, security, and scalability.

Engineered self-hosted GitHub Actions runners on GCP, reducing build times by 64% (from 25 minutes to 7-9 minutes) and achieving 60% cost savings.

Established robust CI/CD pipeline with automated testing, staged QA deployments, and gated production releases for consistent and safe delivery.

Drove ongoing cloud cost optimization through proactive resource rightsizing and workload tuning; maintained GKE infrastructure and operational stability.

EPSYHEALTH | DEVOPS ENGINEER (CONTRACT) Jan 2021 - Nov 2022, London, UK

Architected and deployed enterprise-grade **AWS infrastructure** from ground zero as sole DevOps Engineer, including networking architecture, IAM/SSO framework, ECS orchestration, and data platform foundations.

Implemented multi-region infrastructure-as-code using **Terraform Cloud**, with automated CI/CD via **GitHub Actions**.

COGNIFLARE | DEVOPS ENGINEER (CONTRACT) Aug 2020 - Dec 2020, London, UK

Delivered greenfield **Big Data infrastructure** for **GlaxoSmithKline** via Cogniflare engagement, architecting scalable and secure data processing solutions on **Azure**.

Implemented infrastructure-as-code using **ARM Templates**, **Azure CLI**, and **PowerShell**, with automated deployment pipelines through **Azure DevOps**.
